

On solid ground

The Hydraulic Compactors are designed for effectively compacting soil in trenching, ground levelling, embankment construction, driving in and pulling out posts, sheet piling and other formworks.

Optional 360° endless hydraulic rotation allows optimal positioning and precise handling (HC 350 – 1050).

The integrated flow and pressure control valve prevents overloading.

Optional backfill blades for clearing and moving soil.

To improve force distribution and thus lessen the strain, the outward shock mounts are tilted 15°.

No need for manual greasing thanks to the permanent oil splash lubrication.
