

CLIENT FEEDBACK

GK Hunter

Gareth enquired about alternatives to his current breaker that seemed to always be in the shop. At BAEG we understand the importance for limiting downtime on your asset. I invited Gareth to our fit for purpose workshop in Malaga to first show him our one stop shop facility and to show him our SB hammer range.

Gareth was initially sceptical of the SB Hammers as they were a lot smaller in footprint than his current breaker.

After a product overview and highlighting the product features such as the unique solid body cast Gareth interest quickly grew. It offered similar working tool diameter as the much larger breaker he currently was using and due to the smaller footprint would enable him a lot more manoeuvrability out on the jobsite.

“Its only a matter of time until these things are everywhere on jobsites around Perth.”

GARETH HUNTER Owner/Operator

A longer working length for the tool was deemed necessary and we promptly had one delivered and also added one to our stores just to have one on hand at all times for the client.

Gareth in his words on a follow up call “this hammer packs a punch.”
